New "Graphite grease" released

Part number : LP1652

Volume : 4g

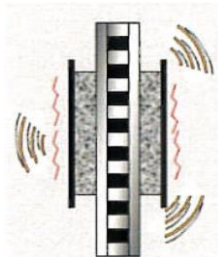

Price : JPY 500

Comes with : S, X, Z type

Cause of brake squeal

Squeaking brake is triggered by vibration caused by friction force generated between brake pads and discs.

As countermeasures, auto industry has been adopting brake grease for a long time.

What are important characteristics of brake grease?

○De-Coupling

In order to prevent brake vibrations from resonating in brake calipers, it separates brake pads and caliper pistons by lubrication effect.

○Damping

In order to prevent brake vibrations from resonating in brake calipers, it reduces resonance between brake pads and caliper pistons.

○Durability

Reducing heat effect on the grease is the most important point to keep its performance.

What was improved in the new grease?

Durability against heat is significantly improved.

This new grease firstly comes with street sports brake pads of S, X, Z type as these are supposed to be used under severe heat conditions and the new grease is suitable for it.

NEW TO RANGES.

We are proud to announce new to ranges.
